                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein search, using

TITLE OF INVENTION: DITECTION OF ANALYTES
FILE REFERENCE: 07257/042001
CURRENT APPLICATION UNMBER: US/11/334,622
CURRENT FILING DATE: 2006-01-17
PRIOR APPLICATION NUMBER: US/9/554,000
PRIOR FILING DATE: 2000-04-20
PRIOR FILING DATE: 2000-04-20
PRIOR FILING DATE: 1997-03-14
NUMBER: 05/818,252
PRIOR FILING DATE: 1997-03-14
NUMBER: 0F SEQ ID NO5: 56
SOFTWARE: FASHSEQ for Windows Version 4.0
SEQ ID NO 12
LENGTH: 17
Sequence 18. Application US/10508063A
Publication No. US20060088832A1
GENERAL INFORMATION:
APPLICANT: Deutsches Krebsforschungszentrum
APPLICANT: ANGEL, Peter
APPLICANT: HRSTENBERGER, Gerhard
APPLICANT: RICHTENBACH, Ute
APPLICANT: RICHTER, Harmut
APPLICANT: HESS, Jochen
APPLICANT: HESS, Jochen
TITILE OF INVENTION: TAP-70, A NOVEL MARKER FOR
FILLE REFERENCE: 31304-701.831
CURRENT APPLICATION NUMBER: US/10/508,063A
CURRENT FILING DATE: 2004-09-16
                                                                                                                                                                                                                                                                                                                                                                                                                  S

Publication No. US20060112440A1
GENERAL INFORMATION:
APPLICANT: Tsien, Roger Y.
APPLICANT: Tsien, Roger Y.
TITLE OF INVENTION: FLUORESCENT PROTEIN SENSORS FOR TITLE OF INVENTION: DETECTION OF ANALYTES
FILE REFERENCE: 07257/042001
CURRENT APPLICATION NUMBER: US/11/334,622
CURRENT APPLICATION NUMBER: US/09/554,000
PRIOR FILING DATE: 2000-04-20
PRIOR APPLICATION NUMBER: 08/818,252
PRIOR FILING DATE: 1997-03-14
NUMBER OF SEQ ID NOS: 56
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 39
LENGTH: 17
TYPE: PRT
ORGANISM: Artificial Sequence
FEATURE:
COTHER INFORMATION: Calmodulin binding peptide-2

XX HOMC XX ALTI XX ALTI XX HOMC XX HOMC XX ALTI XX HOMC XX antibody; carbohydrate-deficient transferrin; CDT; non-glycosylated transferrin; alcoholism; alcoholic; diagnosis; human. Human CDT peptide fragment ADG46076; 05-JUL-2002; 2002DE-01030550. 19-MAY-2003; 2003EP-00011334. 07-JAN-2004. EP1378521-A1. Homo sapiens 25-MAR-2004 ADG46076 standard; peptide; (DADE-) DADE BEHRING MARBURG GMBH (first entry) 23 B

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMCGKEDLIWELL, TTEDSIAKIMNGRADAMSLDGGF, SKLSMGSGLNISSEN and YEKYLGEEYVAAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization. Claim 4; SEQ ID NO 2; 21pp; German.

                                             The present sequence represents human transferrin polypeptide. Transferrin polypeptides and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. erebral ischemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, whice lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; transferrin; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest; cerebrovascular disorder; disorder lischemia; angiogenesis; nervous system disorder; Alzheimer's disease; infection; ocular disorder; corneal infection; wound healing; epithelial cell proliferation; aging; organ transplant.

                                              The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants granulocyte colony stimulating factor receptor, glucagon, interleukin 6 platelet-derived endothelial cell growth factor, cyclin-dependent kinas inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated mucleic acids are useful for identification of variant sequences and detection candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis such

polynucleotides. The human MEPR polypeptides, polynucleotides and modulators are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MEPR, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, properties, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, polycythemia cirrhosis, hepatitis, paroxysmal nocturnal hemoglobinuria, polycythemia vera, psoriasis, primary thromobocytopenia or cancer), developmental disorders (e.g. renal tubular acidosis, anemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, gout, Graves' disease, Hashimoto's thyroiditis, irritable bowel syndrome,
                                                                                                                                                                                                                                                              allergy or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-JAN-2002; 2002US-0348769P.

                                                                     õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
```

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide

Claim 27;

Page; 190pp; English.

molecules, e.g.

w diagnostic and therapeutic polynucleotides and polypeptides, use diagnosing a condition, disease or disorder associated with human lecules, e.g. autoimmune or inflammatory disorders, in gene therap

therapy or

in gene mapping.

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorders, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline
                                                                                                                                                                                                                                                                                                                                                                                                                                           Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Harthshorne TA, Suchorolski MT, Allus L., Amville SC, Reddy TP; Mooney EM, Delegeane AM, Pannesar IS, Banville SC, Reddy TP; Mooney EM, Delegeane AM, Pannesar SR, Wang X, Au AP, Gerstin Stevens KA, Blanchard JT, Pannear SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirtor V, V Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, G:
with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying indiverse from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germ gene therapy. The present sequence represents a dithp protein of the
                                                                                                                                                                                                                                      The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene therapy. The present sequence represents a dithp protein of invention. Note: The sequence data for this patent is not represe the printed specification, but was obtained in electronic format from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New diagnostic and therapeutic polynucleotides and polypeptides, use in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 27;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; Idw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Schmidt JP,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                     The invention relates to novel human metal binding proteins (MBP) and CC encoding polynucleotides. The MBPs can be expressed by standard CC recombinant methodology. The polypeptides and polynucleotides are useful CC in diagnosing, treating and preventing diseases or conditions associated CC with the decreased expression or overexpression of MBP, such as cell CC proliferative (e.g. cancer, atherosclerosis), neurological (e.g. AIDS, CC epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, CC allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) CC disorders, or infections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid CC sequences of MBP. The MBP or its fragments are useful in screening CC compounds for effectiveness as agonist or antagonist of the polypeptides, CC or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. An CC microarray comprising different nucleotide molecules affixed at distinct CC physical locations on a solid substrate, where at least one mucleotide comprises a first oligonucleotide of polynucleotide sequence compounds to the present that a least 30 contiguous nucleotides of the present segments are presents a human MBP and expression for profellar The arresent segments are presented as human MBP and expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human metal binding proteins (MBP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant MBP expression e.g. cancer, AIDS, epilepsy, or infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anticonvulsant; nootropic; neuroprotective; cerebroprotective; anti-HIV;
antiallergic; antiinflammatory; thyromimetic; transgenic; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 628 AA;
